

Our Mission

Farmheal strives to drastically minimize the use of pesticides, thus helping farmers to grow more sustainably

About Us

Farmheal is a Stockholm-based KTH startup, founded by a team that is passionate to make farming more sustainable and profitable using deep tech solutions. Our vision is to provide farmers with detailed chemical application insights to control and reduce pesticide usage on the farms.

Solution

Our solution is a smart sensor powered by AI which can sense and capture crop nutrient data. The product is called as α Heal and acts as a crop doctor, prescribing the amount of pesticide to be fed to the crop at the right place and time.

Key Benefits

35-70%
Pesticide Savings

Cost Effective

Realtime
and Autonomous

Crop Agnostic

Supported by

Sting
